WORK EXPERIENCE

Software Development Intern – Bluestock Fintech

Aug 2025 - Sep 2025

- Assisted in developing backend features for financial analytics applications using Node.js, SQL, and REST APIs.
- Wrote and optimized SQL queries for data retrieval, helping improve API response time by around 15–20%.
- Contributed to building data processing modules used for generating financial reports and analytics dashboards.
- Debugged backend issues and tested API endpoints, helping improve system stability and reduce runtime errors.

MERN Stack Intern – Zidio Development

July 2025-Aug 2025

- Assisted in developing RESTful backend APIs using Node.js, Express, and MongoDB for analytics-based web applications.
- Built modules to parse and process Excel datasets, enabling structured data storage and analysis within the application.
- Wrote MongoDB queries and helped implement indexing to improve API response performance by ~15%.
- Collaborated with the development team to test backend APIs and improve data handling workflows for analytics features.

PROJECTS

Excel Analytics Platform

React.js, Node.js, Express, MongoDB, Chart.js, XLSX.js

- Built a web platform to upload Excel files and generate interactive data visualizations through Chart.js
- Implemented file parsing, API integration, and MongoDB-based storage for dynamic analytics.

AI Job Preparation Platform

React.js, Node.js, MongoDB, Gemini AI, JWT, Puppeteer

- Developed a full-stack GenAI web application that analyzes resumes and job descriptions to identify skill gaps and generate interview questions.
- Implemented JWT-based authentication and user dashboards for personalized job preparation workflows.
- Integrated Gemini AI APIs to generate interview questions and ATS-optimized resume suggestions.
- Built resume parsing and skill extraction modules using Puppeteer and backend processing pipelines.

Flood Management & Prediction Application

React.js, Node.js, Python, TensorFlow, MongoDB, APIs

- Developed an AI-powered flood prediction system using ML models and geospatial data.
- Implemented risk-zone visualization and evacuation route mapping for disaster management.

EDUCATION

Bachelor of Technology in Computer Science & Engineering (2022–2026)

ABES Institute of Technology, Ghaziabad — CGPA: 8.7/10

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems

Senior Secondary Education (CBSE, 2021) – Rishabh Academy School, Meerut | 89.6%

Secondary Education (CBSE, 2019) – Rishabh Academy School, Meerut | 96%

TECHNICAL SKILLS

- Languages: Java, C++, Python, JavaScript (ES6+)
- Frameworks/Libraries: React.js, TailwindCSS, Bootstrap, Express.js, TensorFlow, PyTorch (basics)
- Backend: Node.js, REST APIs, JWT Authentication, API Integration
- Databases: MongoDB, MySQL
- AI / Generative AI: TensorFlow (Basics), PyTorch (Basics), Prompt Engineering, LLM API Integration (Gemini)
- Tools & Platforms: Git, GitHub, VS Code, Firebase, Netlify
- Others: Responsive Web Design, Resume Parsing, AI-powered Interview Question Generation

ADDITIONAL INFORMATION

Certifications

- Google Cloud – Data & Cloud Fundamentals (2025), React Development – CRC ABESIT, Core Java – Softpro India, Generative AI – Infosys Springboard, Artificial Intelligence with Python – Infosys Springboard

Achievements

- Hacknovate 6.0 Winner – Girls Category, Solved 250+ problems on CodeChef (2★ army_echo_85), Completed 160-day GFG DSA Challenge, Solved 50+ problems on LeetCode, Smart India Hackathon 2025 (Internal Level, Top 50 teams)
